

# Setup of Districts in District Analyser

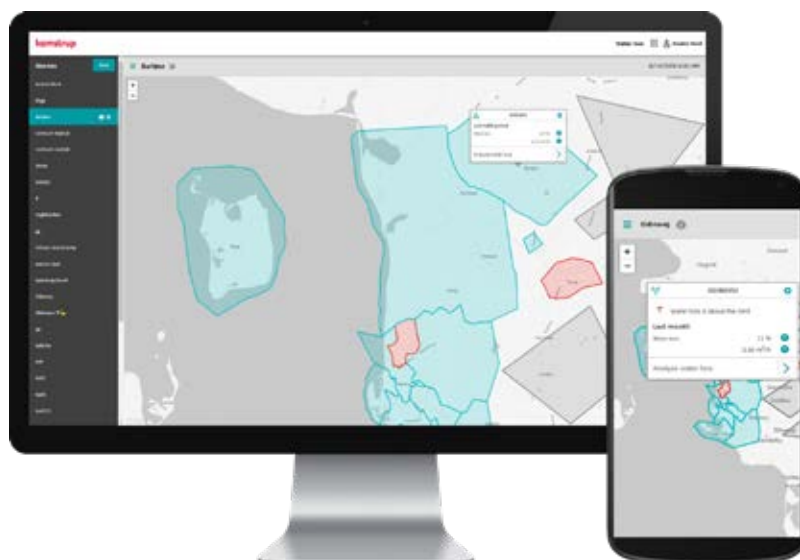

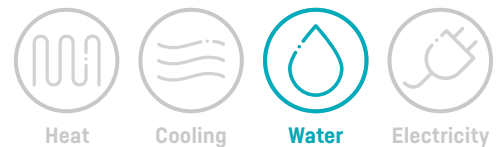

With Setup of Districts, we help you setup districts in the Kamstrup Water Intelligence module, District Analyser. This gives you the full overview of your distribution network split into districts with detailed insight on inlet flow, consumption, night flow and water loss, which lets you follow developments closely, target your efforts and act as soon as the water loss increases in one district.

## What is in it for you?

You avoid spending time specifying districts or drawing them on the map. We handle everything concerning the set-up and ensure that all you have to do is monitor the application.

### Who is this for?

Setup of Districts is for you who want Kamstrup to setup the districts in District Analyser so that you get a complete overview of your distribution network split into districts.

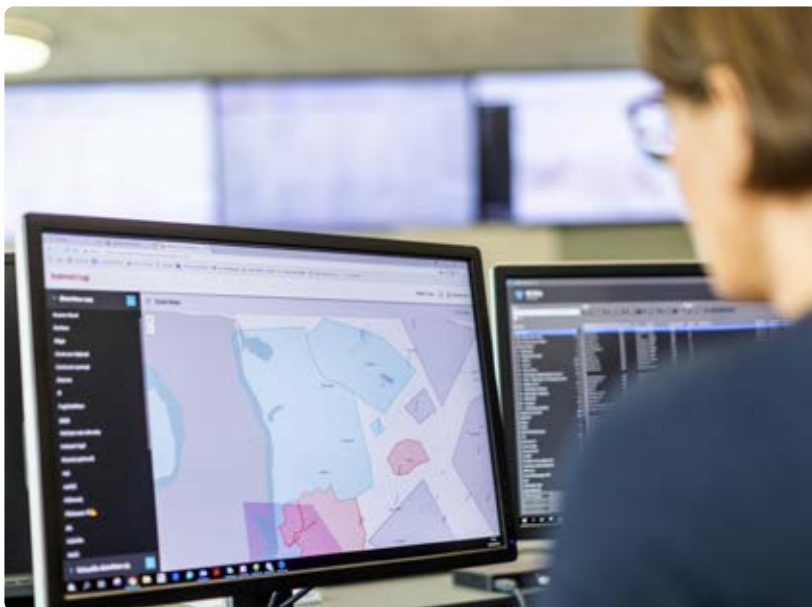

**kamstrup**

## What do you get?

Having us setup your districts in District Analyser, means that we:

- Draw up the districts
- Name the districts
- Setup water loss limits for your individual districts
- Indicate inbound district meters for each district
- Indicate outbound district meters for each district

### Looking for more?

With our add-on services you can customise your Setup of Districts service to give you just what you need.

They include:

- **Training** in District Analyser
- **Pipeline Integration** service
- **Adding additional district meters**
- ...and much more

Ask your Kamstrup contact for details.
