

Pipeline Integration Service Water Intelligence

With Pipeline Integration Service, we integrate your pipeline network layout for you in the Kamstrup analytics platform, Water Intelligence.

This gives you an improved overview of your assets enabling you to pinpoint where there is an incident, how the pipeline network is designed around it or how you should design your districts.

Who is this for?

Pipeline Integration service is for you who want to add an extra dimension to the overview you have over your distribution network in the different Water Intelligence modules – and would like us to handle the integration for you.

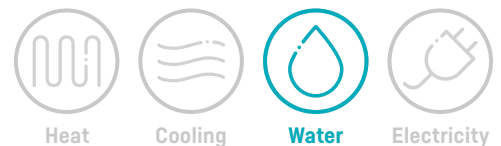

What is in it for you?

- **Increased transparency**

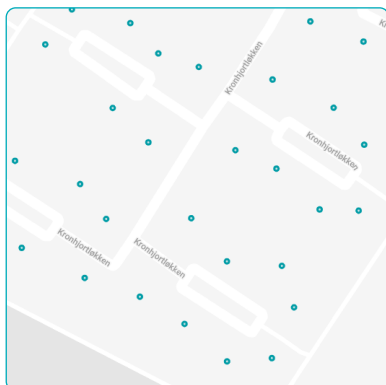

With multiple data sources in one application, you can see the connection between the location of the meter, the noise level and the pipeline network, which gives you a better basis for making the right decisions.

- **Preventive maintenance**

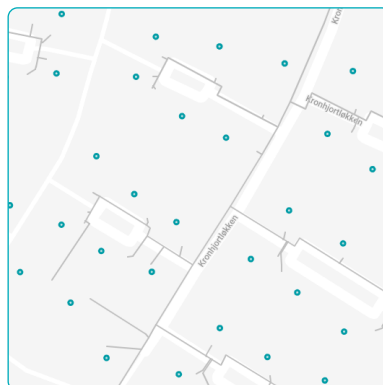

The more transparency and data you have, the better you can identify trends, follow developments and possibly even predict what will happen in your distribution network, so your investments and preventive maintenance become fact-based.

With pipeline network

kamstrup

What do you get?

Integration of pipeline layout

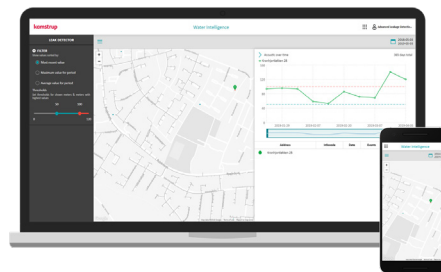

We contact your pipeline department or provider and coordinate with them to ensure that the pipeline layout is handed over to Kamstrup in the right format for integration into the Water Intelligence platforms.

In this way, you benefit from the same improved transparency across both of the modules Leak Detector and District Analyser.

Should you need additional support such as updating your pipeline information if it were to change, this can be acquired upon request. Ask your Kamstrup contact for more information.

District Analyser

Leak Detector

Note! The file format supported for pipeline integration is GeoJson, and the coordinate system needs to be EPSG:4326 WGS84.

Looking for more?

With our add-on services you can customise your support solution to give you just what you need.

They include:

- **Targeted training**
- **Dedicated help** for a specific task or project
- ...and more

Ask your Kamstrup contact for details.
