

# Leakage Monitoring Trial Service

With Leakage Monitoring Trial Service, we provide you with data and help to ensure you get the most out of your Leak Monitoring trial period. We take care of everything relating to monitoring and identifying potential leaks in your distribution lines and service connections.

This gives you the best possible conditions to quickly achieve a high success rate when detecting and verifying leaks.

## What is in it for you?

- **More time, less responsibility**  
We take responsibility for monitoring your distribution pipes and service connections to identify potential leaks. In other words, we do the work for you and let you know if anything requires your attention.
- **Efficient leak verification**  
We inform you if we detect a potential leak and present you with our findings as well as our recommendations on how you can verify the leakage on site.
- **Full transparency**  
While we monitor your pipes, you can follow our efforts from the sideline, as you also have access to the Leak Detector module during the trial period.
- **Follow-up to ensure success**  
During the trial period, we will do regular follow-ups with you to check up on your experience and success rate locating and verifying leaks. And you can, of course, also reach out to us if you have any questions or issues with the tool.

## Who is this for?

The Leakage Monitoring Trial Service is for you who want Kamstrup to assist you in monitoring and identifying potential leakages in your trial area throughout the trial period. It is designed for those who do not have the time or resources to onboard a person to do leak monitoring or who prefer to spend their time on other tasks. We recommend this service together with the Leak Detector module to get the most out of your trial period.

## What do you get?

### Data import and leakage monitoring

Once the flowIQ®2200 meters and READy remote reading system have been installed in your trial area, we import data into the Leak Detector module and start monitoring the meters to identify potential leaks in your distribution lines and service connections.

Leaving your leakage monitoring to us means that you can focus your time and attention on other tasks.

### Follow-up and support

Throughout the trial period, we set up regular follow-up calls with you to ensure that you have the right data and support to optimise your field visits to locate and verify leaks.

You can also reach us through the Kamstrup service desk via web, email and phone to get help with any issues or questions you may have related to leakage verification.

The Leakage Monitoring Trial Service is available throughout your 90-day trial period. Depending on your needs, the period can be extended upon request. Ask your Kamstrup contact for more information.

## Looking for more?

With our additional services, you can customise your trial solution to give you just what you need.

They include:

- **Training** in how to monitor and verify potential leakages
- **Dedicated help** for a specific task or project
- ...and much more

Ask your Kamstrup contact for details.
