

## Display user guide for Kamstrup OMNIPOWER CT electricity meter

### Intermediate 2 – Display configuration 710

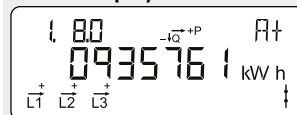

**OBIS code**  
Identification number.

**Phase indication**  
L1 flashes when there is voltage on the phase.  
The arrow indicates the present current direction.

**Optical infrared eye**  
For reading and programming data.

**SO diode**  
Flashes 10,000 times per kWh.  
The display changes via the button – the change takes place upon button release.  
Approx. 2 minutes after the last button press, the display changes automatically to the view 1.8.0 – accumulated electricity consumption in kWh.

#### Normal display

#### Accumulated active positive energy

Total electricity consumption from the electricity grid.  
Measured in kilowatt hours [kWh].

2

#### Accumulated active negative energy

Total electricity production for the electricity grid.  
Measured in kilowatt hours [kWh].

#### Accumulated reactive positive energy

Total reactive electricity consumption from the electricity grid.  
Measured in kilovolt ampere reactive hours [kvarh].

#### Accumulated reactive negative energy

Total reactive electricity production for the electricity grid.  
Measured in kilovolt ampere reactive hours [kvarh].

#### Accumulated reactive energy R1

Total inductive reactive electricity consumption from the electricity grid.  
Measured in kilovolt ampere reactive hours [kvarh].

#### Accumulated reactive energy R2

Total capacitive reactive electricity production for the electricity grid.  
Measured in kilovolt ampere reactive hours [kvarh].

#### Accumulated reactive energy R3

Total inductive reactive electricity production for the electricity grid.  
Measured in kilovolt ampere reactive hours [kvarh].
