

# Course in the installation of external antennas for heat, cooling and water meters

At this course you will learn how to efficiently install external antennas and in that way obtain a better network performance.

We work with various ways of carrying out a proper installation of antennas. The course includes concrete examples and an introduction to the requirements and special conditions for the installation of antennas.

As far as possible and relevant, the course includes practical exercises.

## Who can participate?

The course is aimed at installation technicians who work with installation and exchange of meters.

It is primarily held in Denmark, but can also be offered in other countries. It is held as classroom training either at your place or at Kamstrup in Stilling.

## Preconditions

Registration as a Kamstrup customer.

## How to participate

Contact the sales department of Kamstrup for further information.

Heat

Cooling

Water

Electricity

## Course content

- Introduction
- Test
- Installation types
- Antenna rules
- Cable rules
- Questions and support

Course number: BC41120
