

Increase efficiency in smart buildings

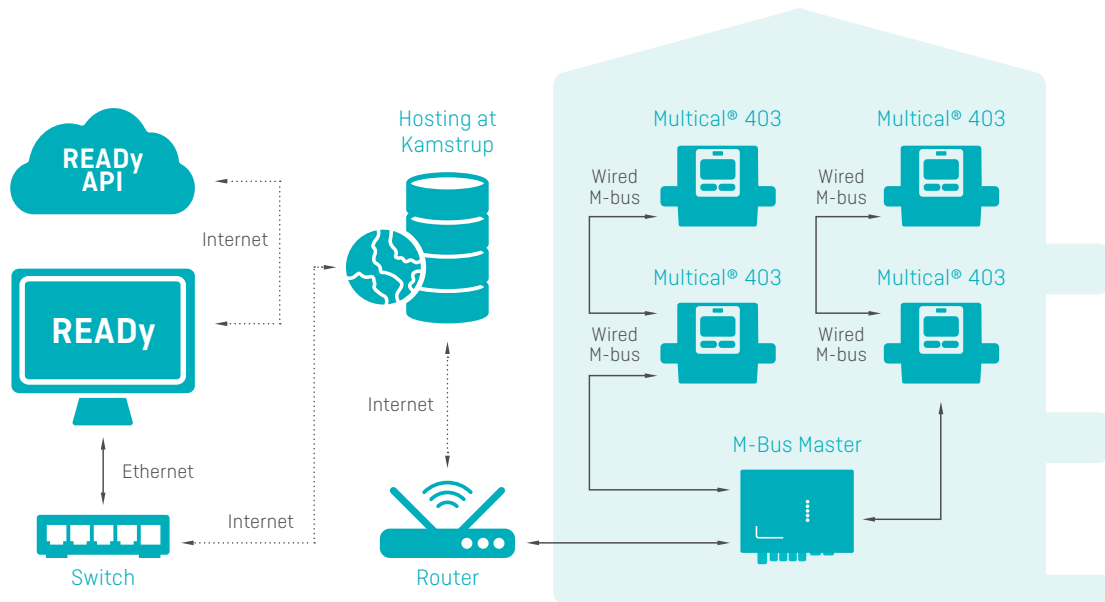

Kamstrup offers a strong solution for building owners and operators to improve efficiency via robust remote meter data collection.

Our unique solution consists of:

- MULTICAL® Heat/Cooling meters
- New M-Bus Master Controller
- READY software
- Kamstrup-hosted secure database
- READY API

With the meters wired into the new M-Bus Master Controller, data is transferred to a hosted database or directly to READY, which manages and collects data. The solution supports the use of READY API, which makes third-party integration possible (e.g., CO2 accounting services).

Unlock the value of Kamstrup's hosted solution

The entire system, including Kamstrup System hosting, will save you time and money by establishing and maintaining your software and IT platforms/servers. You and your customers will not have to care about handling GDPR compliance, IT security or back-up of data. You will experience that your software and servers are always up-to-date and they are running at the highest performance and accessibility.

The meter reading software READY handles both wired and wireless Kamstrup meters, so all metering data can be handled in one meter data management system.

The solution allows meters to be read automatically every hour, and you can even select priority meters to send data every 5 minutes. It is a robust tool to have at hand as it provides efficient billing, uniquely precise customer service, and energy-saving opportunities.

Benefits of the new M-Bus Master Controller

- **CHEAPER INSTALLATION:** The solution can be mounted on a wall without an electrician and will still be protected against tampering.
- **RELIABLE DATA:** A local logger ensures no data is lost if the fast and secure connection with READY is down for any reason.
- **2-WAY COMMUNICATION:** This enables remote firmware updates and possible future services, like consumer control, energy scheduling, or hiding the previous tenant's consumption log.

With Kamstrup, you continuously have opportunities for growth and access to new solution offers. Are you interested in increasing the efficiency of your smart buildings with our solution? Contact your Kamstrup Account Manager now.
