

Heat Intelligence – get maximum value from your investment

Description

Are you getting full value from your data?

This course gives you an introduction to Heat Intelligence and helps you understand how the application is best used for optimizing your distribution system.

We will look into how Heat Intelligence combines data from your meters with GIS-data about your distribution system and why detailed data is important for the functionality of the application.

The course is structured around use cases and is a mixture between introductions to analysis methods to optimize your distribution system and hands-on exercises where you get to apply the methods on your own distribution system.

After the training, you should have a better and deeper understanding of Heat Intelligence and how to utilize the insights in your daily work.

Course content

- Introduction to the calculation model and the value of data
- Walk-through of functions in Heat Intelligence
- Introduction to concrete analysis to help optimize your distribution system
- Hands-on exercises to apply your new knowledge to your own distribution system
