

Leak Report Service

With Leak Report Service, we monitor your water distribution network in Kamstrup's Leak Detector – once a month you receive a list of potential leaks to assist you in efficiently localizing and verifying leaks, so that you can reduce your level of non-revenue water in an easy way.

What is in it for you?

Water loss reduction

We help you reduce your water loss in your water distribution network by pinpointing where the acoustic leakage detection from Kamstrup indicates potential leaks in your water pipes.

Efficient use of time

We deliver a monthly leak report with addresses of potential leaks, so that you can prioritise your field visits based on where they will have the biggest impact and ensure that you save time in monitoring, identifying and prioritizing leaks to be efficient.

High hit rate for beating leaks

In our report, we constantly improve our hit rate of leak recommendation and of our coverage of being able to identify leaks in your network. These improvements are incorporated in our leak report which means that you do not have to be an expert in understanding acoustic noise figures from your Kamstrup meter.

Getting a good start

In the leak report, we advise you where to look for potential leaks and provide you with guidelines to increase your success rate for verifying and locating leaks with our Up & Running service.

Who is this for?

Kamstrup's Leak Report Service is for you who want to improve the efficiency of your monitoring, identification and prioritization of leaks in the water distribution network by having someone to do the job for you, so that you can target your efforts on locating and verifying leaks.

What do you get?

The Acoustic Leakage Detection solution from Kamstrup is based on acoustic noise monitoring in the water meter, focusing on noise originating before the water meter. The acoustic noise is converted into actionable insights to identify potential leaks in the water network. With Leak Report Service, we monitor your water network for you in Leak Detector. Once a month, you receive an email from Leak Detector with a list of potential leaks and a list of meters with a high noise level.

Should you need any support during the process, please contact us, or consider our complimentary leak detection services.

Figure 1: An example of the monthly leak report

The report is sent directly to your email address, so you do not need to work with Leak Detector – you get the conclusion of our experience in understanding noise curves to identify potential leaks.

Looking for more?

We would like to help you reduce your waste of water.

For that purpose we can also offer:

- **Leak Report Service Up & Running**
An onboarding service to the leak report where we guide you through the first 3 monthly reports to ensure that you get a fast grasp of what the report contains and how you could use it to reduce your water loss.
- **Leak Detector**
A digital tool for you to see noise curves and get info about potential leaks from your water meters on a daily basis. Our recommendation is to use Leak Detector in case you have a challenge with non-revenue water.

Ask your Kamstrup contact for details.
