

# Extended update frequency

Get access to frequent control of the connection between the installed meter and your READY solution via [check.kamstrup.com](http://check.kamstrup.com). You can ease the installation of any remaining meters and the commissioning of the network.

After an installation phase, there may be meters that for various reasons could not be installed. To ease your work with the installation of these remaining meters, we offer you a 3-month period in which the installed concentrators deliver data to [check.kamstrup.com](http://check.kamstrup.com) with an increased frequency so that meter installations can be carried out quickly and efficiently.

## Who is this for?

This service is relevant to utilities with meters that communicate via Wireless M-Bus and that are hosted by Kamstrup.

Heat

Cooling

Water

Electricity

You inform us about which concentrators an extended update frequency must include.

We reconfigure the concentrators and ensure frequent data flows to [check.kamstrup.com](http://check.kamstrup.com).

You receive a service message from My Kamstrup when the configuration has been completed and your 3-month period starts.

The service runs for a period of three months and can be extended by agreement with further three months.

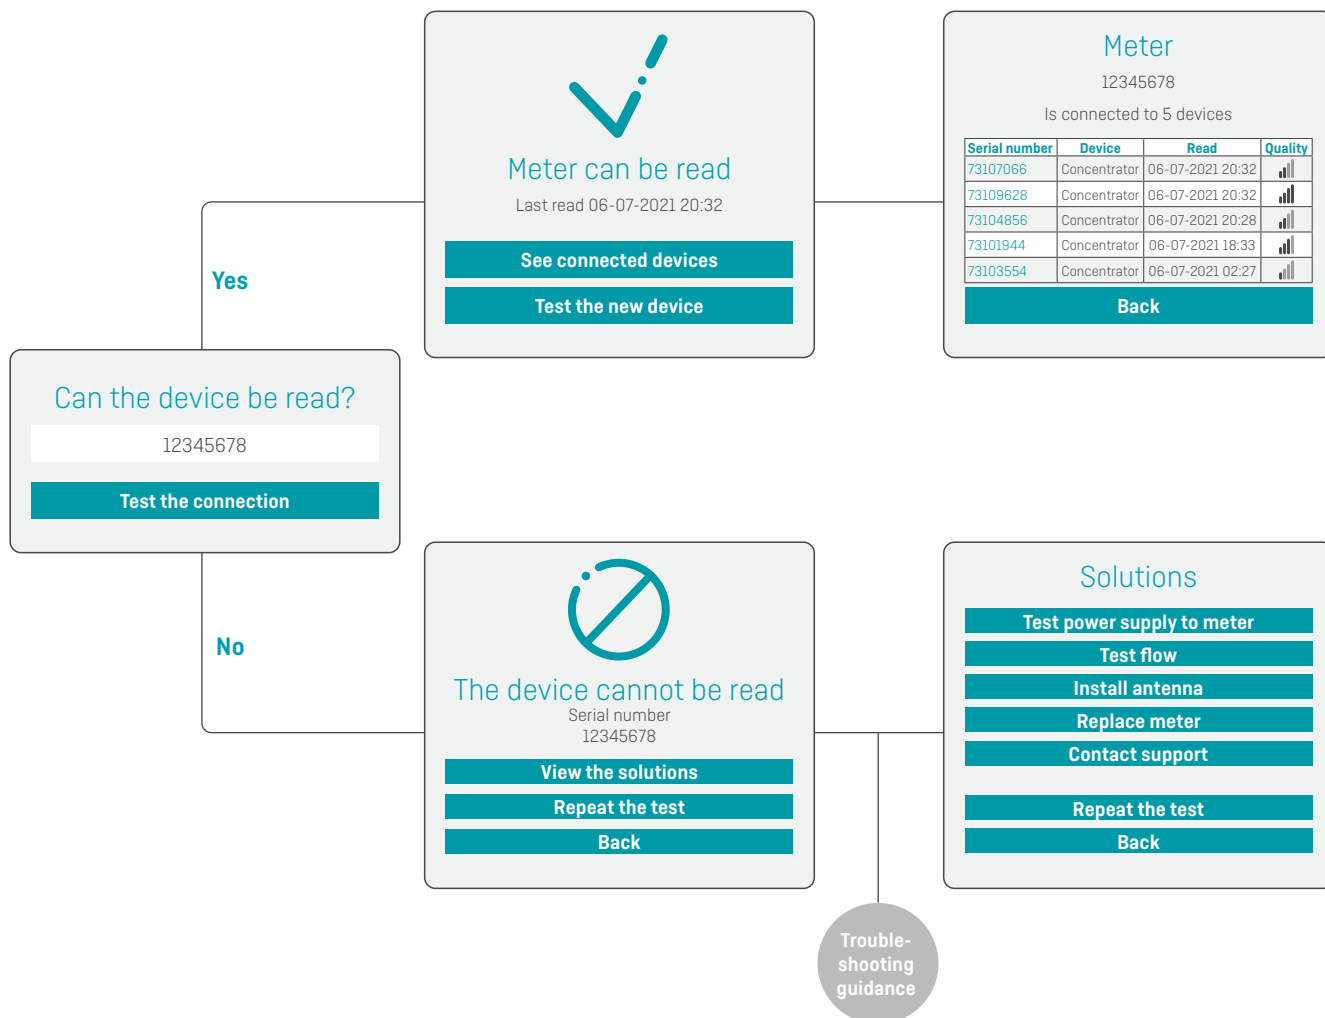

Please be aware that the data consumption is likely to increase in the period and that the costs of this are not covered by Kamstrup. The increase in the data consumption will, among other things, depend on the number of metering points and the telecommunications provider.
