

Take-Back and Extended Producer Responsibility

Extended Producer Responsibility

As a manufacturer of smart metering solutions, Kamstrup is subject to extended producer responsibility requirements for:

- Waste Electrical and Electronic Equipment (WEEE) EU Directive 2012/19/EU
- Batteries EU Directive 2023/1542
- Packaging EU Directive 2025/40.

This directive regulates the market placement and takeback of electrical and electronic products. We ensure responsible handling of end-of-life materials. We comply with WEEE, Batteries, and Packaging regulations under EPR, and secure take-back processes to support our customers' environmental efforts.

Take-back and recycling service

We or Kamstrup distributors ensure handling and registration of end-of-life electrical and electronics products, packaging, and batteries in EU countries, following country-specific regulations. In the customer portal (*MyKamstrup*), which is accessible through the Kamstrup website, customers can order take-back services.

WEEE, Battery and Packaging Registrations

In accordance with European and country-specific requirements, the individual EU subsidiaries of Kamstrup are registered with the respective authority or take-back program responsible for implementing the WEEE Directive. In table below there is an overview of registration numbers in the markets where Kamstrup has WEEE, batteries and packaging obligations.
